- True or False 6. Warning labels combined with Material Safety Data Sheets (MSDS) are the primary means of obtaining information on a chemical's health hazards & general safety precautions.
- True or False 7. MSDS provides detailed health and safety information, precautions regarding handling, as well as procedures for emergencies and first aid.
- True or False 8. MSDS should be used to determine the proper clean-up and disposal methods for a chemical that has spilled.
- True or False 9. There are three basic routes of entry a chemical can enter your body:
- Through the skin
  - By breathing it
  - Through ingestion or swallowing the material
- True or False 10. The primary route of entry for chemicals is by ingestion or deliberate swallowing of the materials.
- True or False 11. Radiation levels generated by computers or Video Display Terminals (VDT) are as low as the general background radiation found naturally in the soil and from the sun.
- True or False 12. Ergonomics is the science which adapts the work environment with people so that they can interact safely and efficiently with machines.

- True or False      13. Asbestos is not a hazard as long as it is maintained in good condition and not allowed to become airborne.
- True or False      14. If you become injured on the job, you should report it to your supervisor only when you know you are seriously hurt.
- True or False      15. Only 25% of accidents are a result of unsafe attitudes and unsafe behaviors.

**DOCUMENTATION OF EMPLOYEE SAFETY TRAINING**

All employees will be given general orientation safety training at the time of hire. General safety and health orientation training shall include but not limited to:

- ✓ General work rules and procedures
- ✓ Hazard communication
- ✓ Emergency action and fire plan
- ✓ Reporting of injuries
- ✓ Back injury prevention

I certify that I have been provided the general employee safety and health orientation training as part of the New Employee Orientation.
