

Bug Mission!

Bugs can be sneaky creatures and are always around. They're fun to observe and easy to find if you take the time to look for them! Scientists who study insects are called entomologists.

Steps to complete this mission:

- 1) Find an open space. This can be in a park, the wilderness, out a window or your backyard. You choose!
- 2) Find a bug to observe. Fill out the fields below with your findings.

Date:

Time:

Location:

Weather (circle one):    

What kind of bug are you observing?
Does it have wings? How many legs?

What is it doing?
Describe its behavior.

Use the space below to
draw the bug.

Your mission, should you choose to accept it, is to go outside! You may be surprised at how much fun a simple focused moment in nature can be. Please share with family and friends!

Post your parks/backyard nature photos and tag them with #NatureSceneInvestigator to win prizes from Inside the Outdoors Foundation.

Photos from Orange County locations posted on Facebook, Twitter, or Instagram are eligible. Winners will be chosen quarterly.
