

Natural Resources Scavenger Hunt

Natural Resources are materials found in nature that are useful or necessary for living things. We use **natural resources** every day. Take this scavenger hunt around your house to see what **natural resources** you use. Record your findings in your Nature Journal, on this sheet, or take a picture of the item. While out on this scavenger hunt, make observations using your senses, just as a scientist would!

Look for something:

1. made of wood
2. made of glass (sand is used to make glass)
3. made of metal
4. made of rock or stones
5. made with oil (hint: plastic is made from oil).
6. that is helping conserve energy in your home
7. that brings water to you to use (hint: think about where you can wash your hands, get a drink of water)
8. that you can reuse
9. that you can recycle
10. that uses soil
11. that an animal can use to survive
12. that needs water to survive
