

# Natural Resources Scavenger Hunt

Natural Resources are materials found in nature that are useful or necessary for living things. We use **natural resources** every day. Take this scavenger hunt around your house to see what **natural resources** you use. Record your findings in your Nature Journal, on this sheet, or take a picture of the item. While out on this scavenger hunt, make observations using your senses, just as a scientist would!

Look for something:

1. made of wood.
2. made of cotton.
3. that uses water.
4. that uses electricity.
5. that uses oil to run.
6. made with oil (hint: plastic is made from oil).
7. that is from a plant.
8. that is from an animal.
9. that is made from a rock.
10. that is made from metal (metals come from rocks).
11. that uses paper.
12. that you would eat.
13. that uses soil.
14. that uses a battery.
15. an animal might use.
