

Plant Wildcard Mission!

Plants are very important to us! They help create the oxygen that we breathe! As you hunt for plants, see how many different species you can find. Scientists who study plants are called botanists.

Steps to complete this mission:

- 1) Find an open space. This can be in a park, the wilderness, out a window or your backyard. You choose!
- 2) Find a plant to observe. Fill out the fields below with your findings.

Date:

Time:

Location:

Weather (circle one):    

What kind of plant are you observing?

What shape are the leaves?

Are there flowers?

Are there insects on the plant?

Describe what you see around the plants.

Use the space below to draw the plant.

Your mission, should you choose to accept it, is to go outside! You may be surprised at how much fun a simple focused moment in nature can be. Please share with family and friends!

Post your parks/backyard nature photos and tag them with #NatureSceneInvestigator to win prizes from Inside the Outdoors Foundation.

Photos from Orange County locations posted on Facebook, Twitter, or Instagram are eligible. Winners will be chosen quarterly.
