

Shadow Mission!

Shadows are funny friends. Sometimes they tag along far behind you. Other times they sneak up on you. They play hide and seek with you and can even seem to disappear. Discover your shadow and observe what it does throughout the day. Scientists who study shadows are called physicists.

Steps to complete this mission:

- 1) Find an open space. This can be in a park, the wilderness, or your backyard. You choose!
- 2) Find your shadow and fill out the fields below.

Date:

Time:

Location:

Weather (circle one):    

Can you see your shadow? If you can't, why not? What size is your shadow?

Can your shadow move? Describe how your shadow changes throughout the day.

Use the space below to draw your shadow.

Your mission, should you choose to accept it, is to go outside! You may be surprised at how much fun a simple focused moment in nature can be. Please share with family and friends!

Post your parks/backyard nature photos and tag them with #NatureSceneInvestigator to win prizes from Inside the Outdoors Foundation.

Photos from Orange County locations posted on Facebook, Twitter, or Instagram are eligible. Winners will be chosen quarterly.
